## Download Driver Sound Lenovo G40-45

**DOWNLOAD:** <https://byltly.com/2im3mz>

**DOWNLOAD**

The sound in my Lenovo G50-45 with a Lenovo G40-45 are very good and the microphone works well. The problem is that the microphone sometimes doesn't work for a short while and the only way to get the sound working again is to restart the computer. Version Note: I tried to find the correct driver for my USB microphone. The drivers for the notebook on the official Lenovo site are for the Lenovo G50-45 and not for the Lenovo G40-45. After a bit of searching on the internet I found the drivers on this website. These driver worked on my G50-45 perfectly. However, when I plug the microphone into the other notebook (G40-45), I can only get sound for a short while. The sound doesn't play back for a long time even if the microphone is disconnected. Also the microphone doesn't get recognized by the notebook. I am sorry for the vague description. The volume control doesn't work in Windows Media Player, VLC and the Sound Recorder application, but it works perfectly with all other

---

applications (iTunes, Spotify and others). There are also two sound applications on the system: 1. Lenovo Sound Recorder (button on the keyboard of the notebook) 2. Lenovo Control Center (button on the Lenovo G50-45) I just noticed the microphone is working with the Lenovo Sound Recorder application. I will have to look into this one. The driver I use is the Fujitsu driver and it also has the microphone enabled. It is working fine, but every once in a while it stops working for a short while and then it works again. I guess the driver that you used didn't have it enabled, but it should be enabled by default. The volume control doesn't work in Windows Media Player, VLC and the Sound Recorder application, but it works perfectly with all other applications (iTunes, Spotify and others). I just noticed the microphone is working 82157476af
